

Bourgault 6700ST Air Seeder

Print Page

Bourgault announces the new 700 bushel 6000 Series Air Seeder. Producers will find many of the advanced features from previous 6000 Series product carts on this new mammoth tank.

This new A/S has four internal tanks with sizes of (from front to rear) 370, 95, 30, and 205 bushels for a total of 700 bu. The tank has three hoppers versus two on all other 6000 A/S. The 30 bu. 3rd tank can be diverted into either tank 2 or tank 4.

The unit is configured with 30.5Lx32 R1 tires on the front, and 650/75R34 R1W duals on the back. The running gear is designed so that the required pressure is only 16 psi for front and 18 psi rear, even with a fully loaded tank.

The front hitch uses the same EZ-Hitch style as found on the other 6000 Series air seeders, except the 6700ST will use a 1-1/2" pin. The 6700ST utilizes a wagon style front axle steering system.
